RESEARCH EXPERIENCE

Research Assistant

Dartmouth University

Sep. 2023 – Present

Remote

- Designed Retrieve Augmented Automatic Prompt Engineer for conditional context generation by LLMs.

Research Assistant

University of Notre Dame

Aug. 2023 – Oct. 2023

Remote

- Introduced a new problem, Graph Mixed Supervised Learning, that describes the need to model new nodes with novel classes and potential label noises.
- Designed a node similarity network to capture the knowledge from the original classes, aiming to obtain insights for the emerging novel classes to weight the training loss of new class nodes with label noises.
- To enhance the similarity network's generalization, we employed the Mixture-of-Experts and introduced the Lipschitz bound to stabilize MoE model output, with a theoretical guarantee.

Research Assistant

Brandeis University

Sep. 2022 – Jun. 2023

Waltham, MA, USA

- Proposed Denoise Masked Graph Auto-encoder to remove malicious edges of the attacked graph.
- Revealed the connection between differential privacy (DP) and GNN robustness, and applied the idea of differential privacy to GNN to improve the robustness.
- Introduced the mixture-of-experts model to the GNN layer to select the better DP experts against attacks.
- Provided a theoretical robust guarantee for the designed Differential Privacy Mixture-of-Experts module.
